USDTF Token — Educational Flash Token Whitepaper

1. Overview
USDTF is a TRC-20 compliant smart contract deployed on the TRON blockchain for educational and demonstration purposes only. It is not intended for trading, investment, or commercial use.

2. Purpose
The token helps developers and learners understand smart contract behavior - especially flash tokens, where token balances may expire or reset. Users can experiment with send/receive functions and observe real token lifecycle behavior on-chain.

3. Features
- TRC-20 Standard: Built on the standard TRC-20 interface.
- Flash Behavior: Tokens may expire, simulating temporary balances.
- Minting: Only the contract owner can mint tokens for demonstration use.
- No Trading Purpose: Not intended to be bought, sold, or held as a financial asset.
- Security:
  - No blacklist
  - No hidden fees
  - No backdoor or upgradeable functions
  - Source code is fully published and verified

4. Transparency
- Contract Verified on TronScan
- Open Source: https://github.com/trotok-sud/USDTF
- Website: https://trotok-sud.github.io/USDTWeb/

5. Disclaimer
USDTF is not a financial product. It should not be considered an investment or token sale.
Its only purpose is to educate and demonstrate how token contracts function on TRON.
